

Generative AI

For HR

Agenda

- Understanding Gen AI Concept
- Gen AI Technology
- AI Use Cases in HR
- Gen AI Prompting
- AI Transformation Leadership
- Gen AI Risk

AI-Driven Organizational Change

The Complimentary Nature of Predictive and Gen AI

Predictive AI

Predictive algorithms that, among other things, can assign probabilities, categorize outcomes, and support decisions

Generative AI

Generative algorithms that, among other things, can create text or images of human-level quality in response to prompts or requests for synthesis

Source: BCG Analysis

AI Types

Symbolic AI

Predictive AI

Generative AI

Types of AI

Type of AI	Core Idea	How It Works	Examples	Strengths	Limitations
Symbolic AI (a.k.a. Good Old-Fashioned AI)	Logic & Rules	Uses explicit rules, logic, and knowledge graphs . Everything is manually coded.	Expert systems, rule-based chatbots, tax calculators	Interpretable, deterministic, great for well-defined domains	Brittle, doesn't handle ambiguity or noise well
Predictive AI	Statistical Learning	Learns patterns from data using ML models (e.g., regression, decision trees, neural nets) to predict outcomes .	Fraud detection, recommendation systems, churn prediction	Accurate with enough data, adapts over time	Needs labeled data, limited to what it's trained on
Generative AI	Creating New Content	Learns underlying patterns of data and generates new, original content (text, image, etc.). Uses models like GPT, DALL·E, etc.	ChatGPT, DALL·E, music generation, code autocompletion	Creative, versatile, handles ambiguity well	Can hallucinate, lacks deep understanding, hard to explain decisions

Hybrid Intelligence

HR Hybrid Intelligence for Talent Management

When to use AI?

Principle: Automate the repeatable

- Identify tasks with high volume, low variability, and clear success criteria.
- Quantify ROI: calculate time saved, error reduction, and cost per task.
- Design for scalability: modular components, reusable connectors, and cloud-friendly architecture.
- Example: automating the daily reconciliation of sales data between a CRM and a financial system.

Principle: Enhance reasoning

- Purpose: Enhance human decision-making through AI insight and automation.
- Core components: Data acquisition, AI analysis, human oversight, outcome delivery.
- Benefits: Faster insight, reduced cognitive load, scalable knowledge reuse.

AI Adopt in Criteria

High Repetition	AUTOMATE Robotic Process Automation (RPA)	AGENTIFY AI Workflow Automation
Low Repetition	IGNORE Keep Manual	AUGMENT Human-in-the-loop
	Low Reasoning	High Reasoning

AI Workflow Automation

- AI Workflow Automation is the use of **artificial intelligence** to **automate multi-step business or analytical processes** — not just single repetitive tasks.
- It connects systems, data, and decisions into a **continuous, intelligent flow** that learns, adapts, and improves over time.

Traditional automation *executes*; AI automation *thinks* before executing.

Why AI?

- Because **efficiency alone is no longer enough** — organizations need *intelligent responsiveness*.
- AI brings three major shifts:

Old Way

Manual or rule-based automation

Static templates

Human bottlenecks

AI-Driven Way

Context-aware decision automation

Adaptive responses to data

AI-human collaboration

Outcome

Faster, smarter workflows

Real-time intelligence

Scale without chaos

Levels of Intelligence in Automation

Real-world: rule-based email filtering, OCR for invoice data, ML for demand forecasting, autonomous warehouse robots.

Generative AI in Actions

Types of Generative AI

Text Generation

Audio Generation

Image Generation

Video Generation

AI Human-like Function

- Voice recognition
- Speech recognition

- Natural language understanding
 - Computer vision

- Voice generation
- Speech generation

- Natural language generation
- Image generation

AI Skills in HR

Skill	AI Capability	HR Application Examples
Listen	Voice recognition, sentiment analysis, NLP parsing	- Analyze tone/emotion during interviews - Summarize voice-of-employee feedback - Monitor townhall recordings for recurring concerns
Speak	Conversational AI, voice synthesis, dialogue agents	- HR chatbots for FAQs (leave, benefits) - Voice-enabled onboarding assistant - Practice difficult conversations with AI avatars
Read	Text extraction, NLP, semantic search	- Parse resumes to extract skills and experience - Analyze open-text survey feedback - Read policies, handbooks, and flag inconsistencies
Write	Natural Language Generation (NLG), LLMs	- Draft job descriptions - Generate personalized performance summaries - Create learning path recommendations
Think	Predictive models, rule-based logic, agent orchestration	- Forecast attrition or performance - Score promotion readiness - Recommend role changes or team formations

Benefit of AI Applications in HR

Figure 3. Expected benefits and outcomes of AI applications in HR

Application of AI in HR	Examples of expected benefits	Examples of outcome measures
Enhanced candidate experience	• More informative pre-hire communication • Better match of job seekers to roles	• Candidate conversion rate • New hire productivity
Efficient and effective recruitment	• Better prioritization of job requisitions • Accelerated time-to-hire • Accurate assessment of diverse candidates • Identification of the most qualified candidates	• Skill shortages or unfilled vacancies • Average time to fill open positions • Selection ratios of minority and majority candidates • New hire productivity
Enhanced motivation	• Better manager support for their employees • Improved employee experience	• Employee retention • Engagement or experience survey scores
Smarter compensation planning	• Increased pay transparency for employees • Optimized compensation budgets aligned with business strategy	• Compensation satisfaction survey scores • Overpaid or underpaid worker count
Personalized learning	• Accelerated employee skill acquisition • Better alignment of employee skills with business strategy • Enhanced learning experience	• Match between current and required skills mix, skill gap closure • Employee productivity • Course enrollments and completion rates
Career development for all	• Employee driven career management • Employee clarity on opportunities	• Career satisfaction survey scores • Number of internal job applications and moves
24/7/365 Employee support	• Better informed and more productive employees via faster, more accurate answers to questions • Reduced number of support center staff	• Number of process violations or exceptions • Labor costs

Agentic Apps Mind AI Agentic Apps are specialized AI-powered agents designed to handle key business functions. Each app focuses on a distinct intelligence task

Decision Intelligence

Chat directly with your **data warehouse or database**. Convert plain text into analysis, insights, or reports — **text-to-analysis, text-to-insights**, and data-driven answers on demand.

Task Intelligence

Chat with **PDFs, rules, regulations, and SOPs**. Instantly retrieve answers, clarify procedures, and navigate complex documents without manual searching.

Document Intelligence

Turn **any document into structured data**. Combines **OCR with intelligent extraction**, allowing forms, invoices, contracts, and scanned documents to become instantly usable data.

Creative Intelligence

Generate ideas, **content, and designs at scale**. Empower teams to co-create marketing copy, presentations, visuals, and concepts—transforming prompts and business context into high-quality creative outputs that accelerate innovation and communication.

Persona Intelligence

AI-powered **personality and leadership profiling**. Analyze decision-making styles, conflict management, risk tolerance, and leadership traits — designed for assessments, coaching, and personal development.

Commercial Use Cases

Nutritionist AI

Nutritionist AI is an AI system that assists nutritionists in **creating daily cafeteria meal plans for 400 different cafeteria by considering factors for each of the location** like the target group's preferences & energy requirements,, health conditions, ingredients availability, & budget.

Key Benefits:

- Increase satisfaction of the consumers while meeting nutrition requirements.
- Automatic menu designing process with complex criteria by leveraging multiple variable inputs.
- Drives innovation, creating new business opportunities for the client.
- Cost efficient, food waste reduction.

Overall Structure Diagram

Conversational AI for recommend package, provide information and customer services in the **healthcare industry**.

Company: Samitivej Chonburi Hospital
Period: Dec 2023 - Present

Channel: Website

Highlight Features

Package Recommendation

- Unlock personalized health package recommendations designed to meet customer unique needs.

Insightful Information

- Empower your customers with the insights they need to make informed decisions.
- Put knowledgeable control in client hands for confident choices.

Package Search Flexibility

- intelligently interpreting a variety of search criteria for tailored recommendations, ensuring you find the perfect package with ease.

Company: Prukha Real Estate
Period: Apr 2023 - Present

Channel: Website, Facebook Messenger, LINE OA

Conversational AI for sales, marketing and customer service in real estate industry

Highlight Features

- ★ Residential Project Recommendation
- ★ Get more Informations about project, campaign and after-sale service
- ★ Book to visit the showroom
- ★ Handle customers complaint

AI Success Rate

95%

Nong Sai-Jai support customers with various of inputs and inquiries correctly.

Recommendation Rate

What generative AI can do and cannot do

What AI can do

- Text Generation: Create written content, such as articles, poetry, or code.
- Image Creation: Generate images from text descriptions or modify existing images.
- Data Synthesis: Produce synthetic datasets for training machine learning models.
- Language Translation: Translate between different languages while maintaining context.
- Speech Generation: Synthesize realistic human speech.
- Music Composition: Compose new music or modify existing pieces.
- Personalization: Customize content or recommendations for individual users.

What AI cannot do

- Understand Context Like a Human: Struggle with nuanced human contexts and emotions.
- Replace Human Creativity: Cannot truly innovate or create with human-like originality.
- Guarantee Factual Accuracy: Often produce content with factual inaccuracies.
- Ethical Judgment: Unable to make ethical decisions or understand moral nuances.
- Physical Interaction: Cannot interact with the physical world directly.
- Emulate Deep Expertise: Limited in simulating deep, specialized expertise or wisdom.
- Self-Awareness: Lack self-awareness and consciousness.

AI Tool in 2026

Personal Use vs Enterprise Use

Personal Use

- Convenience and Accessibility
- Personal Assistance and
- Productivity Limited Scope and Complexity

Enterprise Use

- Operational Efficiency and Automation
- Data Analysis and Decision Support
- Security and Compliance

Personal Use

Personal Use

- Convenience and Accessibility
- Personal Assistance and
- Productivity Limited Scope and Complexity

ChatGPT <https://chatgpt.com/>

<https://gemini.google.com/>

M365 Copilot <https://m365.cloud.microsoft/chat>

Copilot Studio <https://copilotstudio.microsoft.com/>

The screenshot shows the Copilot Studio web interface. At the top, there's a header bar with the Copilot Studio logo and a user profile icon. The main content area is titled "What would you like to build?" and features two tabs: "Agent" (selected) and "Workflow". Below the tabs is a large text input field with a placeholder "Start building by describing what your agent needs to do" and a right arrow button. Underneath, there's a section "Start building from scratch" with three cards: "Create workflow" (described as "Powerful automations speed up your processes with ease and security in mind"), "Create an agent" (described as "Flexible solutions that take action, share knowledge, and handle tasks"), and "Create computer-using agent" (described as "Let agents accomplish even more across apps and websites"). At the bottom, there's a "Recent agents" section with a table listing existing agents.

Name	Type	Last modified	Last published	Owner	Protection status
Agent 1	Agent	Tanasak Ruttan...	Never	Tanasak Ruttanahi...	--
Travel Agent	Agent	# Microsoft Co...	Never	Tanasak Ruttanahi...	--

<https://gamma.app>

The screenshot displays the Gamma app interface. On the left is a sidebar with a search bar labeled 'ข้ามไปที่' and 'Ctrl+K'. Below it are navigation options: 'Gammas', 'แชร์กับคุณ', 'เว็บไซต์', 'ภาพ AI', and a 'โฟลเดอร์' (Folders) section with a '+'. The 'โฟลเดอร์' section contains a message: 'จัดระเบียบ gammas ของคุณตามหัวข้อและแบ่งปันกับทีมของคุณ' and a link 'สร้างหรือเข้าร่วมโฟลเดอร์'. At the bottom of the sidebar are icons for 'เพิ่มเฟลต', 'แรงบันดาลใจ', 'ธีม', 'แบบอักษรที่กำหนดเอง', 'ขยะ', 'การตั้งค่าและสมาชิก', and 'ติดต่อฝ่ายสนับสนุน'. The main area is titled 'Gammas' and features buttons for '+ สร้างใหม่ AI', '+ ใหม่จากว่างเปล่า', and 'นำเข้า'. Below these are filters: 'ทั้งหมด', 'ดูเมื่อเร็วๆนี้', 'สร้างโดยคุณ', and 'รายการโปรด'. A 'Gamma Tips & Tricks' presentation card is shown, featuring a lightning bolt icon and the text 'Gamma Tips & Tricks'. Below the card is a 'ส่วนตัว' (Private) button and a note 'สร้างโดยคุณ' with a date 'ดูล่าสุด 11 days ที่ผ่านมา'. The top right corner shows '+ รับ AI แบบไม่จำกัด', '400เครดิต', a notification bell, and a user profile icon. A 'ตาราง' (Table) button and a 'รายการ' (List) button are also visible. A help icon (?) is in the bottom right corner.

<https://www.canva.com>

The screenshot displays the Canva AI interface. On the left is a sidebar with navigation icons for Create, Home, Projects, Templates, Brand, Canva AI, Apps, and a user profile. The main area features a large header "What will you design today?" with tabs for "Your designs", "Templates", and "Canva AI". Below this is a text input field with the placeholder "Describe your idea, and I'll bring it to life". At the bottom of the input field are buttons for "Design for me", "Create an image", "Draft a doc", "Code for me", and "Create a video clip". A disclaimer states: "Canva AI can make mistakes. Please check for accuracy. [See terms](#) • [Give feedback](#)".

Below the input field, a section titled "See what you can do with AI" displays six suggested prompts, each with a corresponding image:

- Design**: Promote my new bakery opening. Image shows bread and a sign that says "JOIN US FOR GRAND OPENING".
- Image**: A plane taking off the runway with a beautiful sunrise. Image shows an airplane on a runway at sunrise.
- Code**: An interactive pricing calculator that I can share... Image shows a calculator interface.
- Video**: Create an abstract background for a modern arts... Image shows a colorful abstract composition with fruit.
- Write**: A blog post about caring for houseplants. Image shows a stylized plant graphic.
- Code**: An interactive historical timeline. Image shows a timeline graphic.

Role-based AI agents

Pre-built AI agents for functional scenarios

Universal prompts
(Meeting Recap, Summarize document)

Top 10 to "Try First"

with Microsoft 365 Copilot Foundational skills for new users

 1 Recap a meeting – let Copilot keep track of key topics and action items so you can stay focused during the meeting and avoid listening to the recording after. → Draft an email with notes and action items from meeting	 2 Summarize an email thread – get quickly caught up to a long, complex email thread. → Click on the Summarize icon	 3 Draft email – personalize the tone and length. → Draft an email to [name] that informs them that Project X is delayed two weeks. Make it short and casual in tone.	 4 Summarize a document – get right down to business by summarizing long documents and focusing on the relevant sections. → Give me a bulleted list of key points from file	 5 Tell me about a topic/project – provide insights and analysis from across multiple sources to get up to speed quickly. → Tell me what's new about topic organized by emails, chats, and files?
 6 Give me some ideas for ... – boost your creativity with ideas for your work such as agendas, product names, social media posts, etc. → Suggest 10 compelling taglines based on file	 7 Help me write ... – jumpstart creativity and write and edit like a pro by getting a first draft in seconds. → Generate three ways to say	 8 What did they say ... – when you vaguely remember someone mentioning a topic, have Copilot do the research. → What did person say about topic	 9 How do I ... – let Copilot help you build or fix formulas in Excel. → How do I sum values that are greater than 0?	 10 Translate a message – with business becoming increasingly international, it's important to be able to read or write messages in other languages. → Translate the following text into French:

How To Write Effective Prompts for Generative AI Tools?

The 6 Prompt Components

Prompt Guidelines

AI Guardrails

- AI guardrails are built-in constraints and safeguards that keep AI systems within ethical, legal, and operational boundaries.

They help ensure AI:

- Doesn't make harmful or biased decisions
- Respects privacy and consent
- Acts within defined scopes (no unauthorized actions)
- Produces safe, explainable outputs
- Stops or alerts when risks emerge

Effective Prompting Table – Steel Industry Market Research

Components	Prompts	Guardrails
Input	“You are an industry analyst. Summarize steel industry trends (2020–2024) focusing on demand, supply, and pricing.”	“Do not include information outside the steel industry.” “Do not use unverified or speculative data.”
Process	“Summarize trends step by step: 1) Demand drivers, 2) Supply constraints, 3) Pricing trends.”	“Do not provide your own suggestions or opinions.” “Do not skip or reorder the steps.”
Output	“Present findings in 3 sections (Demand, Supply, Pricing) with 3–5 concise bullet points in an executive summary style.”	“Do not write long paragraphs.” “Do not exceed 5 bullets per section.” “Do not use informal language.”
Goal	“Highlight strategic risks and opportunities relevant for a board presentation on steel sector clients.”	“Do not include irrelevant history or academic detail.” “Do not drift away from risks and opportunities.”
Context	“The scope of analysis covers corporate clients in steel and construction . Focus on factors affecting credit risk, loan structuring, and strategy .”	“Do not provide generic textbook-style summaries.” “Do not include context unrelated to corporate clients.”

Quick “Test You” Checklist (what you can ask AI)

- Where’s the evidence?
- What did you miss?
- Are you contradicting yourself? How confident are you?
- Would the answer change if I rephrased the question?
- What if I feed you a false claim?

1) Where's the evidence?

ตัวอย่างคำถาม

- “ช่วยบอกแหล่งอ้างอิงหรือหลักฐานที่ใช้ตอบข้อนี้หน่อย”
- “ข้อมูลนี้คุณอ้างอิงจากอะไร หรือสรุปจาก pattern ไหน?”

สถานการณ์จริง

HR ขอให้ AI สรุปว่า “คนรุ่นใหม่ลาออกเพราะเงินเดือนไม่พอ”
→ ก่อนเชื่อ ให้ถาม “มีหลักฐานไหมว่าเป็นเพราะเงิน? หรือเป็นปัจจัยอื่น?”

AI อาจตอบเพิ่มเติม: survey, research, หรือเหตุผลเชิงข้อมูลที่ลึกขึ้น

2) What did you miss?

ตัวอย่างคำถาม

“ยังมีประเด็นไหนที่คุณยังไม่ได้พูดถึง?”
“มีความเสี่ยงหรือข้อจำกัดอะไรที่ยังไม่ได้อธิบายไหม?”

สถานการณ์จริง

AI แนะนำแผนพัฒนาบุคลากร แต่พูดเฉพาะ training
→ เมื่อถาม "What did you miss?"

AI อาจเสริม: mentoring, rotation, KPI alignment, rewards
ช่วยทำให้คำตอบสมบูรณ์ขึ้นทันที

3) Are you contradicting yourself? How confident are you?

ตัวอย่างคำถาม

- “มีตรงไหนที่คำตอบของคุณขัดแย้งกันเองไหม?”
- “ระดับความมั่นใจของคำตอบนี้ที่เปอร์เซ็นต์ ทำไหม?”

สถานการณ์จริง

AI สรุปว่า “พนักงานมี engagement สูง”
แต่ก็พูดว่า “exit rate สูงขึ้น”
เมื่อถาม

→ “คำตอบคุณขัดแย้งกันหรือเปล่า?”

AI จะตรวจสอบความสอดคล้องของข้อมูล แล้วปรับคำตอบให้มีตรรกะที่ถูกต้อง

4) Would the answer change if I rephrased the question?

ตัวอย่างคำถาม

- “ถ้าฉันถามแบบอื่น คุณจะตอบเหมือนเดิมไหม?”
- “ช่วยลองตอบใหม่โดยไม่ใช้คำว่า ‘ประหยัดต้นทุน’ เป็น keyword”

สถานการณ์จริง

ถาม AI: “ทำอะไรให้ลด OPEX”

AI อาจตอบเฉพาะ cost-cutting

→ ถ้าถาม “แล้วถ้าผมถามว่า ทำอะไรให้เพิ่ม productivity คำตอบจะต่างไหม?”

AI อาจเสนอ automation, workflow optimization, upskilling

ใช้เพื่อดู “blind spot ของ AI”

5) What if I feed you a false claim?

ตัวอย่างคำถาม

- “ถ้าฉันบอกว่า Thailand มีประชากร 200 ล้าน คุณจะเชื่ออย่างไร?”
- “ถ้าข้อมูลนี้ผิด คุณจะรู้ได้อย่างไร?”

สถานการณ์จริง

ถ้าคุณอยากเชื่อกว่า AI จะเชื่อข้อมูลมั่วโหม เช่นในงานข่าวหรือรายงานผู้บริหาร
คุณลองยื่นข้อมูลผิดให้ AI เช่น
“ยอดขายของบริษัทเราลดลง 80% ในไตรมาสนี้ใช่ไหม?”

AI อาจตอบว่า

→ “ข้อมูลนี้ไม่ถูกต้อง เพราะงบการเงินจริงแสดงว่าลดลง 8% ไม่ใช่ 80%”
เป็นการทดสอบความสามารถในการ ตรวจจับ misinformation

AI support to Employees Journey

Where to begin?

11 STAGES OF THE EMPLOYEE LIFE CYCLE

Interview Process

- During the interview stage, generative AI can craft tailored interview questions based on the candidate's profile and job requirements. This ensures a more comprehensive and fair assessment while maintaining consistency across interviews.
- AI can also generate post-interview summaries, helping hiring managers make more informed decisions.

First Day Experience

- AI can generate customized welcome packages and first-day schedules tailored to each new hire's role and background. This might include personalized welcome messages from team members, AI-generated guides to company systems and processes, and custom-crafted icebreaker activities to help new employees connect with their teams.

Learning and Development Milestones

- As employees reach key milestones in their tenure, generative AI can create personalized learning pathways. By analyzing an employee's skills, performance data, and career aspirations, AI can recommend and even generate custom learning content, ensuring continuous growth and engagement.

Recognition and Rewards

- AI can personalize recognition and reward programs by generating tailored appreciation messages or suggesting rewards that align with individual preferences. This personalized approach can significantly boost the impact of recognition efforts, enhancing employee motivation and engagement.

Career Advancement Opportunities

- When employees are ready for the next step in their careers, generative AI can identify potential internal opportunities and generate personalized career development plans. AI can suggest skill-building activities, potential mentors, and even create simulated job scenarios to help employees prepare for new roles.

AI
AGENTS.

Copilot Agent AI

The screenshot displays the M365 Copilot interface. AI Citizens

AI Users

- Use approved AI tools to support daily work
- Interpret AI outputs within their job context
- Remain fully accountable for final decisions

AI Professionals

- Apply AI systematically within their function
- Translate domain logic into AI workflows
- Improve quality, consistency, and efficiency of AI usage

AI Use Case Owners

- Own the business problem, not the model
- Decide when AI should or should not be used
- Accountable for value realization, risk, and impact

AI Community of Practice / Talent Management

- Design progressive AI learning journeys
- Move people up the capability ladder intentionally
- Turn individual learning into collective intelligence
- Redesign roles, expectations, and career paths for AI era

AI Change Leader

- Drive behavioral change and trust in AI usage
- Address emotional and cultural barriers
- Measure real adoption and impact

AI Citizens x AI Literacy

AI Capability	AI Users	AI Professionals	AI Use Case Owners
Know & Understand AI	Basic AI concepts & limits	Deep AI concepts & tools	Strategic AI value & risk
Use & Apply AI	Use AI in daily tasks	Design AI workflows	Decide where AI is used
Evaluate & Create AI	Spot obvious errors	Evaluate & configure AI	Approve, scale, or stop AI
AI Ethics & Responsibility	Follow AI rules	Apply responsible AI	Own ethical outcomes

You also need to be aware of key risks

I. Accuracy	Hallucination (e.g., made-up answers which seem credible, poor abstract reasoning)	• Tune performance and use outputs in combination with other tools to prevent hallucinatory responses • Enrich prompts using advanced prompt techniques to improve accuracy of responses • Fine-tune models to tailor to use-case specific context
II. Security	Susceptible to misuse (e.g., prompt hijacking, misinformation, fraud)	• Validate data and prompts to safeguard from malicious inputs and data leakage • Perform adversarial testing to filter questionable responses • Deploy guardrails to protect enhance data security features
III. Privacy	Leakage of confidential or other sensitive data	• Implement measures to protect sensitive data • Impose access restrictions to limit information
IV. Fairness	Biased output and bypassing safeguards	• Perform manual reviews of and bias testing on output
V. Trust	Undisclosed use/plagiarism reduced trust	• Disclose use of GenAI to users • Explicitly approve and track use cases
VI. Legal	IP infringement/copyright violations and liability from misuse	• Ensure regulatory compliance to prevent infringement • Enforce and review 3rd party contracts

THANK YOU
